

Property Pest Management Plan (PPMP)

Gympie Regional Council
Phone: 1300 307 800
www.gympie.qld.gov.au/Home

Part 1 - Property Details and Background

This PPMP is designed to help you identify pest animals present on your property, develop an effective management plan, and serve as a record of control measures undertaken, including management successes and failures. Keep the PPMP handy to remind you of ongoing monitoring and control requirements.

Land Occupier Property Information

Property Name	
Property Description Lot/Plan	
Property Location/Address	
Additional property attributes <i>e.g. Permits, Features, Agreements, Easements, Licenses, Waterways, Endangered species etc.</i>	
Council Area	Gympie Regional Council
Occupier's Name	
Phone	
Email	
Site meeting request	Please call 1300 307 800 if you would like to request a site meeting with a Council Biosecurity Officer.

Part 2 - Defining the Problem – Restricted Matter (pest animal species)

Enterprise Description and Land Use

Current Uses (select relevant)	☐ Grazing ☐ Dairy farm ☐ Hobby farm ☐ Cropping ☐ Residential ☐ Bush block ☐ Forestry ☐ Tourism ☐ Other _____
Property Area (acres)	

Overview of Pest Animal Species on the Property

Identify declared pest animals covered by this plan. Add additional pages as required.	
How will you identify what pests are causing impacts (camera surveillance, sand plots, scat, tracks).	
What are the impacts (stock/pet attack/death, crop/infrastructure damage)?	
Where are the impacts occurring (waterways, calving paddock, lucerne crop)?	
What is the distribution & number of pest animals?	
Where are the pest animals coming from?	
Where & at what time are the pest animals harbouring & moving?	

<i>Develop a property map, identifying pest location, density & movement patterns, including fences, roads, water courses (add map page/s as required).</i>	

Animal Ecology and Biology

Contact a Council biosecurity officer if you require advice to complete this section or go to <https://pestsmart.org.au/> and use the search function.

What are the practical pest animal management options that apply (exclusion fencing, deterrents – lighting, guardian animals, baiting, trapping, shooting).	
When is the optimum time to implement control (prior to breeding, during dry season)?	
What factors will affect control actions (cost of control actions, own dogs, weather constraints, sensitive receptors, lack of time, skills, knowledge or tools to do the job).	

Detail how you plan to manage the factors affecting control (from above). <i>E.g. Tie 1080 baits so they can't be moved, which aids retrieval of remaining baits, thereby reducing the risk off-target animals finding untaken 1080 baits.</i>	

Part 3 - Control Management Actions – Restricted Matter (pest animal species)

Control Management Methods/Steps

Detail the pest control program for your property for each pest animal infestation described in Part 2 (for a period of 1-3 years). Describe pest animal location and control method. Repeat as required. <i>E.g. feral pigs: put exclusion fencing around fruit trees. Prefeed pigs next to creek for 2 weeks, then install trap & continue to feed. Close trap and euthanase trapped pigs. Continue process while pig activity remains.</i>	

Part 4 - Yearly Activity Calendar
Species Name: _____

***Complete a separate calendar for each pest species.**

Activity	Jan	Feb	March	April	May	June	July	August	Sep	Oct	Nov	Dec
Monitor <i>Creek lines, previous infestation areas, new impacts/sign.</i>	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐
Control actions <i>E.g. trapping program, ground-shooting, baiting program.:</i>	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐
Detailed comments:												

Part 5 - Yearly Review

What has worked well this year, what has been less effective?

[illegible]

What pest management activities need to change for next year?

[illegible]
